

CERA-DUCT CO₂ Emissions Comparison Data

CERA-DUCT emits the least CO₂ compared to other conventional pipes.

CO₂ Emissions

*Materials per 100m using 125φ × 8 openings

The Three R's of Waste Management

Reduce the raw virgin material usage by mixing recycle materials

Reduce water consumption by recycling waste water from glazing

Reuse the heat from the kiln process for drying

Reuse glazing materials for glazing

Recycle the defective product from the drying and firing process as materials

Recycle public construction sludge for use in materials

In addition, ceramic is strong and does not deform or corrode, so it lasts a long time and reduces life cycle costs.
